OBJECTIVE

Computer Science undergraduate with a background in economics and finance, specializing in backend development with Java and Spring Boot. Experienced in designing modular, database-driven applications end to end, from schema design through API delivery. Seeking a junior backend or full-stack role to apply and grow these skills on production systems.

SKILLS

Languages & Frameworks: Java, Spring Boot, Spring Data JPA, MySQL, PostgreSQL
APIs & Integration: REST API design, OpenFeign, Webhooks, JSON/JSONB data modeling
Tools: Git & GitHub, Docker (containerizing Java/MySQL services), Postman, Flyway
Practices: Layered architecture (Controller/Service/Repository/DTO), database migrations, dependency injection
AI Tools and LLM's: Claude Code, Minimax, Ollama, Antigravity

PROJECTS

Task Manager — Workflow Engine

Programmable workflow automation engine supporting JSON-defined business logic, scheduled and event-driven execution.

- Built a custom execution engine in Java 21 / Spring Boot 3.4 supporting HTTP_CALL, LOG, EMAIL, and TRANSFORM task types.
- Embedded JavaScript execution via GraalVM Polyglot to transform data between workflow steps without redeploying.
- Implemented draft/publish versioning so workflow definitions can change without breaking production runs.
- Added cron-based scheduling, webhook triggers, and per-step retry/failure policies for resilient execution.
- Modeled flexible workflow definitions using PostgreSQL JSONB with Flyway-managed migrations.

Stack: Java 21, Spring Boot 3.4.3, PostgreSQL, Flyway, GraalVM Polyglot, OpenFeign, MapStruct, Lombok

Student Course Enrollment System

Backend platform for managing students, courses, teachers, and enrollments.

- Designed a layered architecture (Controller, Service, Repository, DTO, Mapper) with Spring Boot, JPA, and MySQL.
- Modeled core academic domain logic: course creation, teacher assignment, and enrollment workflows.
- Structured the codebase to support future additions such as authentication and scheduling.

Client-Service Manager

Backend application for managing client interactions and service workflows.

- Built with Java, Spring Boot, and MySQL, with a clean architecture designed for scalability.
- Implemented user roles, service tracking, and request handling.

EDUCATION

Georgian Technical University — Tbilisi, Georgia
B.S. in Computer Science (in progress, currently 3rd Course) — started September 2024

AI-ASSISTED DEVELOPMENT

Comfortable integrating AI coding assistants into a development workflow: Claude Code (agentic workflows, MCP integrations), Cursor and Void (AI-assisted editing, multi-file refactoring), and Antigravity (agent modes, security-aware usage).
